```python
import json

data = {}
data['people'] = []
data['people'].append({
    'name': 'Scott',
    'website': 'stackabuse.com',
    'from': 'Nebraska'
})
data['people'].append({
    'name': 'Larry',
    'website': 'google.com',
    'from': 'Michigan'
})
data[
{
  "Heart Volume": 833.9
  "Coronary Calcium": 590.2
  "Coronary Calcium Range": "Red"
}
]

})

with open('data.txt', 'w') as outfile:
    json.dump(data, outfile)
```
